

## **Connecting your 4S-Link to a Smart Phone, Tablet or other device.**

**This page is under development but here is a start. FYI The 4S-Link was developed with FLDigi and an Android phone.**

First download a digital app to your device.

Using an audio output plug for your device, determine which connections carry the speaker output and which carry the microphone input. Then make up a jumper to connect to the 4S-Link.

The plug will have multiple rings so try them all and also the tip.

We hope to have a spreadsheet of devices and their audio connections, but that is in the future yet.

Please post your questions on the kits Yahoo Group. [groups.yahoo.com/group/4s-link](http://groups.yahoo.com/group/4s-link).

Thank you for purchasing the 4S-Link Digital Interface.
